1 About

The [Occupational Profile Tool](#)¹ allows users to browse, create, edit and share occupational profiles in the field of Earth Observation, Geo-information, GNSS, Satellite Communications and Satellite Systems. Profiles are linked to the GeoSpace Body of Knowledge (BoK) for domain-specific concepts and skills, to the European Skills, Competences, Qualifications and Occupations (ESCO) classification for transversal and cross-sectoral skills, to UNESCO's International Standard Classification of Education Fields of Education and Training (ISCED-F) classification for the application field and to European Qualifications Framework (EQF) to define the knowledge level of the occupational profile.

The Occupational Profile Tool (OPT) is part of the SpaceSUITE ecosystem of tools, and was developed by the [Geospatial Technologies Research Group \(GEOTEC\)](#)² from the Universitat Jaume I, Castelló de la Plana, Spain, in the context of the ERASMUS+ project [SpaceSUITE](#)³.

2 Anonymous users, login & registration

You can browse the Occupational Profile Tool without logging in. As an anonymous user, you can navigate through the occupational profiles, use filters, and open the detail pages of any public resource, including downloading the profile in different formats.

If you want to create, edit, or manage Occupational Profiles for your organization, you need to log in with a SpaceSUITE account.

Figure 1 shows the login window used across the SpaceSUITE tools, including the Occupational Profile Tool. If you already have an account, enter your email (1), your password (2) and click the “Login” button (3). If you forgot your password, type your email (1) and click “Forgot password?” (4) to receive an email with instructions to recover it. If you do not yet have an account, click “Register” (5). You can also sign in with your Google account (6).

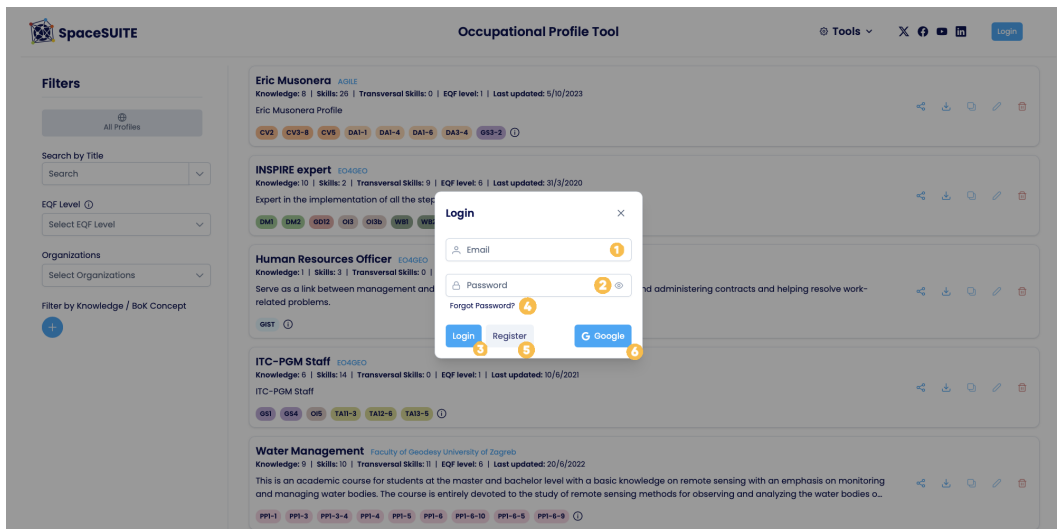

Figure 1: SpaceSUITE Tools login modal.

To create a new account (Figure 2), fill in your email (1), your password (2) and repeat your password (3). The password must contain at least 6 characters. Then click the “Register” button (4) and you will be redirected to the home page of the Occupational Profile Tool.

When registering, if you see the error ‘The email address is already in use by another account’, it means your email is already registered. Write your email in the login part of the form and click ‘Forgot password?’ to receive a link with instructions to recover it.

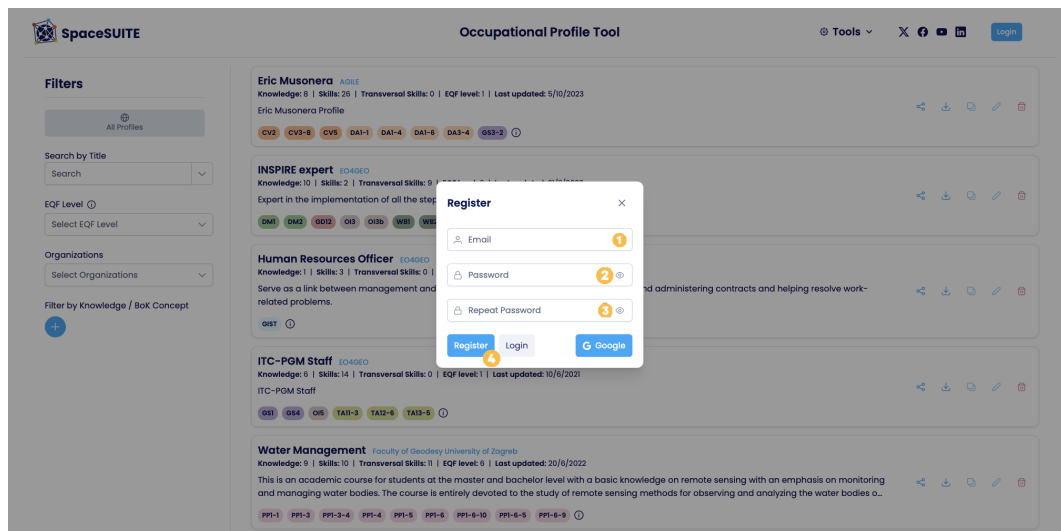

Figure 2: SpaceSUITE Tools register modal.

3 User details and organizations

As can be seen in Figure 3, after logging in you will see an icon with your initial in the navigation bar (1). Clicking on this icon opens a menu where you can choose between the *Profile*, *Organization* and *Logout* options (2).

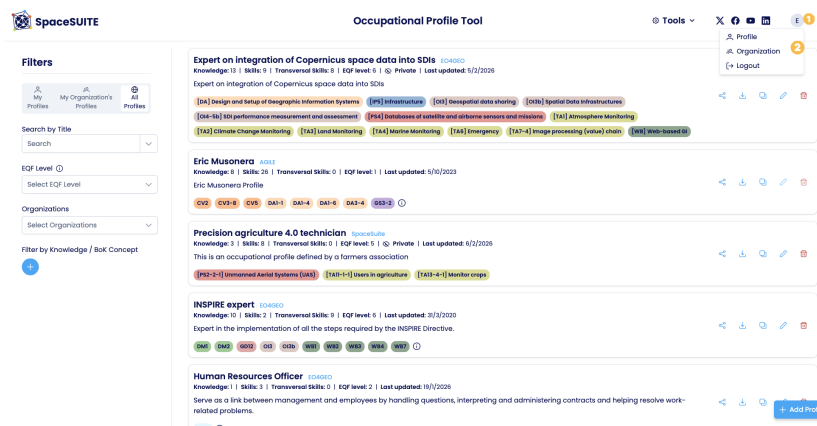

Figure 3: SpaceSUITE Tools navigation bar.

The *User Profile* section (Figure 4) allows you to view and update your personal information. Your email address is displayed in a non-editable field (1), while your name can be modified in the editable field below (2). After making any changes, click the *Update Name* button to save the updated information (3).

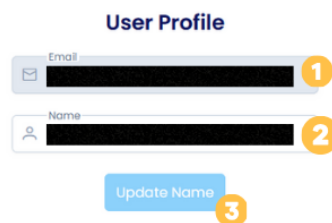

Figure 4: SpaceSUITE profile page.

As shown in Figure 5, the *Your Organization(s) Details* section allows you to manage your organizations. You can join an existing organization by selecting it from the dropdown menu (1) and clicking the *Join Organization* button.

Below the dropdown, you see the list of organizations you belong to, with information such as the organization name (2) and description (3). Each organization entry includes buttons to copy the organization email (5) and to leave the organization (6). You can also create a new organization by clicking the *Create New Organization* button at the bottom of the page (7). If you are an administrator of an organization, you will see the *Admin Content* button (4), which opens the administrator panel.

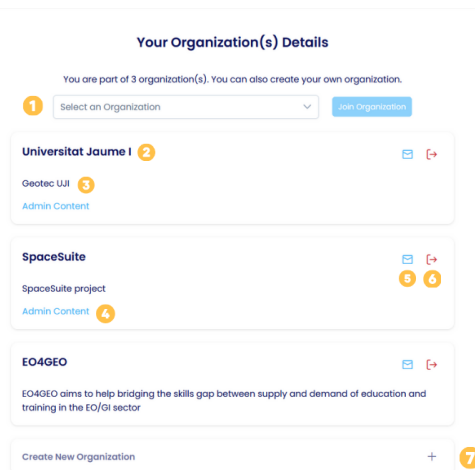

Figure 5: SpaceSUITE organizations page.

In the organization administrator panel (Figure 6), you can manage a specific organization. The left side shows editable fields for the organization name (1), description (2) and contact email (3); click *Update Information* to save any changes (4).

To better structure the content of your organization in the Occupational Profile Tool,

you can create *Divisions*. Administrators can add new divisions by entering a name and clicking *Add Division* (5), and remove existing divisions using the delete icon (6). A *Delete Organization* button is available at the bottom for permanent removal of the organization (7).

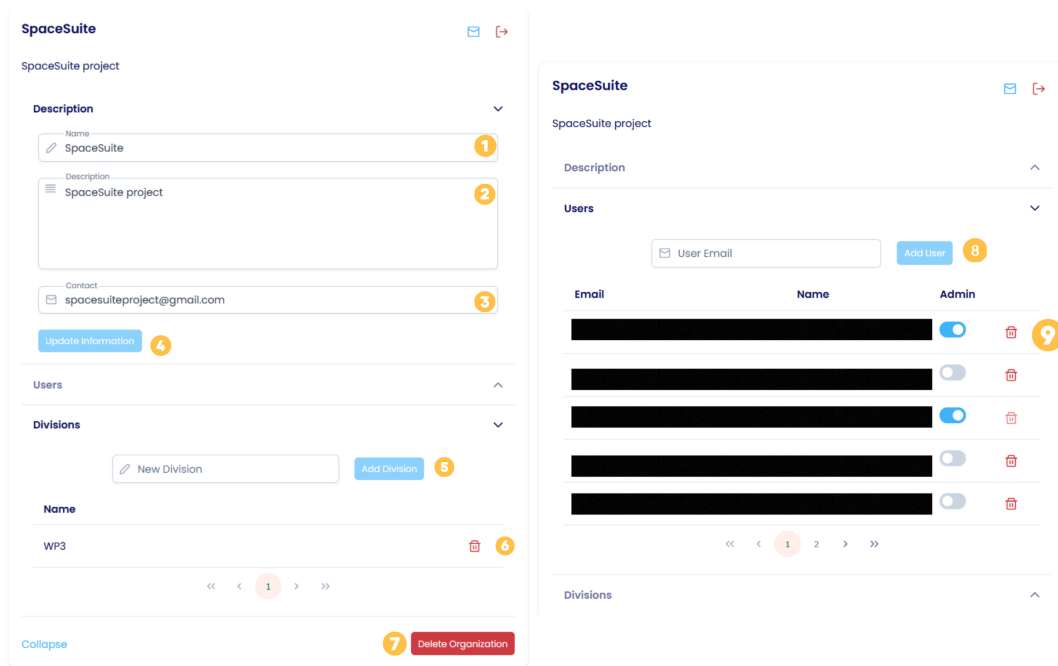

Figure 6: SpaceSUITE organization admin panel.

You can also manage the members of your organization. To add a user, type the email address they use to log in and click the *Add user* button (8). Existing users are listed with their email, name, an admin toggle and a delete icon (9), which allows administrators to change a user's role or remove them from the organization.

4 Main view

Figure 7 shows the main view of the Occupational Profile Tool. This interface provides a complete environment for discovering occupational profiles through card-based presentation, left-side filters panel and pagination.

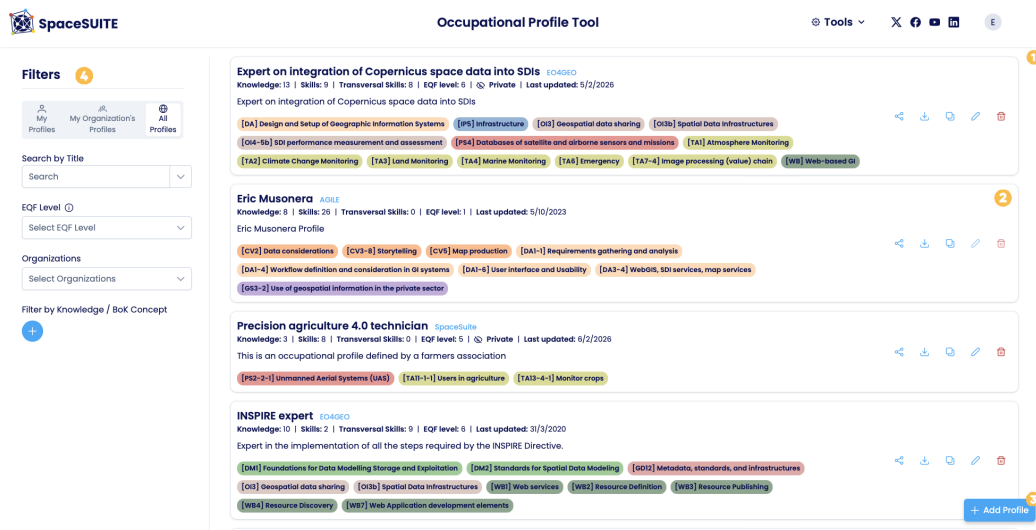

Figure 7: Occupational Profile Tool main view.

4.1 Profile cards

The main area shows a vertical list of profile cards (one per row) (1). Each card displays the profile name (click to open the detail view), organization, division, counts for Knowledge/Skills/Transversal Skills, EQF level, visibility (Public/Private), description, last updated date, and colored BoK tags (2). Cards also offer a set of buttons to *Share* (copy the profile url), *Download* (available on PDF, RDFa, Turtle and RDF/XML), *Edit*, *Duplicate* and *Delete*.

BoK tags show concepts annotated from the GeoSpace BoK. Two display modes are used according to the available space:

- **Full tags:** code + complete name when space allows.
- **Code only + info icon:** abbreviated codes with “i” icon at the end of the list when full names do not fit; click “i” to open popover with full tag list.

Logged users have a floating *Add Profile* button in the bottom-right corner (3). The pagination controls at the bottom allow navigation through large result sets.

4.2 Filters panel

The left filter panel shows a set of filters in an easy to use interface (4). This section provides access to filters, such as search by keywords (allowing matching on title, description, skills and transversal skills) or filter by EQF level.

Logged users can use an extra filter to show only their own organization's profiles. Filters are applied immediately and cumulatively as you make selections: combine keyword search with EQF filtering, then narrow further BoK concepts. The card list updates in real time to show only matching profiles. To remove filters, use individual clear buttons.

5 Detail view

Clicking the profile title in the main list opens the detail view Figure 8. This dedicated page uses the reworked visual style to display all occupational profile information in a structured, easy-to-scan format. For users with edit permissions (profile creator or organization members), *Edit*, *Duplicate* and *Delete* buttons appear at the bottom-right. *Share* and *Download* buttons are also available here for all the users.

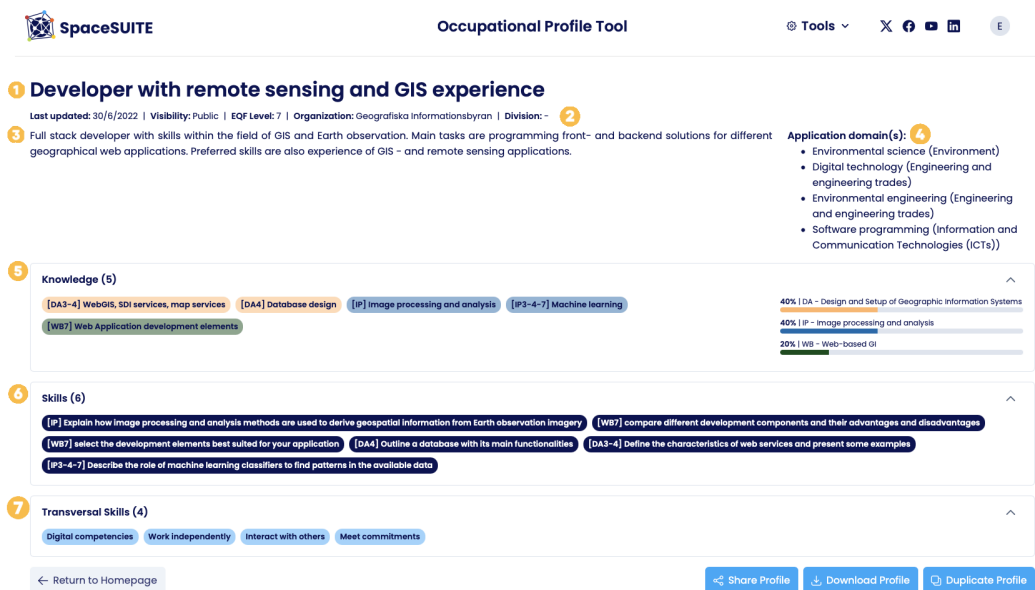

Figure 8: Detail of an occupational profile.

The profile title is prominently displayed at the top (1). Immediately below, a small text provides quick facts: organization and division name, EQF level, visibility status (Private/Public) and last updated date (2).

The full description (3) appears below and offers key information about the profile, like the professional role, key responsibilities, required expertise, and context. Application domain(s) (4) are listed next to the description as a bullet list from ISCED-F classification, indicating the fields of education/training relevant to the profile.

The collapsible BoK knowledge panel (5) works as a row: left side lists annotated concepts as expanded colored tags (codes + full names); right side shows distribution bar chart with percentages by area.

The collapsible Skills panel (6) lists BoK-derived (from concepts) and custom skills as tags. The Transversal skills panel (7) lists selected ESCO skills and custom transversal skills similarly.

Both BoK knowledge tags and ESCO transversal skills tags are clickable links that direct users to the original resource pages where they are defined.

6 Form view

The form view (Figure 9) is used to create new occupational profiles or edit existing ones. Access via floating *Add Profile* button on main view or *Edit / Duplicate* buttons available on the cards and detail view (permission-based). Fields mirror detail layout with new visual style, form validation, and BoK integration. Required fields marked (*).

The screenshot shows the 'Create New Profile' form in the Occupational Profile Tool. The form is titled 'Create New Profile' and is part of the 'Occupational Profile Tool' interface. It includes the following fields and controls:

- Title ***: A text input field with a clear button (X) on the right.
- Public/Private**: Two toggle buttons, with 'Public' selected.
- EQF Level ***: A dropdown menu.
- Organization ***: A dropdown menu.
- Division**: A dropdown menu.
- Description ***: A large text area with a character count '0 / 2000' at the bottom right.
- Application Domain(s)**: A dropdown menu.
- Knowledge ***: A section with a blue '+' button to add knowledge tags.
- Skills ***: A section with a blue '+' button to add skills tags.
- Transversal Skills**: A dropdown menu with a link 'Add custom transversal skills' below it.
- Navigation**: A 'Return' button with a left arrow and a 'Submit' button.

Figure 9: OPT form view.

6.1 How to fill in fields (input types)

The form combines different input widgets to make data entry faster and more consistent:

- **Text inputs:** single-line fields for short values (e.g., Title).
- **Textareas:** multi-line for longer text. (e.g., Description).
- **Dropdown selectors:** choose from predefined values; some dropdowns also allow a custom value to be entered directly in the popover.
- **Toggle buttons:** binary options.
- **Multi-select dropdowns:** select multiple values; some dropdowns also allow a custom value to be entered directly in the popover; selected values are displayed as chips.

- **Chip inputs:** type a value and press Enter (or the + button) to add it as a chip; use this for lists such as custom skills.
- **BoK modal selector:** a dedicated selector to browse/search BoK concepts and add them as Knowledge Annotations.

6.2 Profile fields

- **Title:** (*) Simple text input. Provide a short, descriptive name for the occupational profile.
- **Organization:** (*) Dropdown selector. Choose from your authorized SpaceSUITE organizations responsible for the profile.
- **Division:** Dropdown selector. Optional sub-unit within the selected Organization for better organization.
- **Visibility:** (*) Toggle buttons component. Private (visible only to organization members) or Public (discoverable by all users).
- **EQF level:** (*) Dropdown selector. European Qualifications Framework level (1-8) matching the profile's expected qualification.
- **Application domains:** Multi-select dropdown. Search/select from ISCED-F fields of education/training.
- **Description:** (*) Textarea (max 2000 chars). Detailed overview of the role, including responsibilities, context, required expertise and any notes.
- **Knowledge (BoK concepts):** (*) Dedicated BoK modal selector (responsive visualization/search). Browse/search GeoSpace BoK, select concepts (recommended between 2 and 6) specific concepts; they populate as tags and auto-generate related Skills.
- **Skills:** (*) Chip input. BoK-derived skills appear automatically; add custom via type + Enter or the '+' button.
- **Transversal skills:** Tree multi-select dropdown. Search/select from ESCO transversal skills (toggle full list) or add custom chips.

Click *Submit* to validate form data and save the occupational profile. Invalid fields are highlighted for correction; on success, the app redirects to the profile's detail view.

A Glossary of Terms

BoK: Body of Knowledge. The complete set of concepts and relations between them that make up the GeoSpace domain (Earth Observation, GNSS, Satellite Communications, Satellite Systems), including related skills as defined by the SpaceSUITE project.

EQF: European Qualifications Framework. Eight reference levels describing what a professional knows, understands and is able to do (Level 1 basic to Level 8 doctorate).

ESCO: European Skills, Competences, Qualifications and Occupations classification, used for transversal/cross-sectoral skills in occupational profiles.

ISCED-F: International Standard Classification of Education Fields of Education and Training (UNESCO), used to classify the application domain/field of occupational profiles.

Knowledge: Body of facts, principles, theories and practices related to the GeoSpace domain, represented by specific BoK concepts.

Occupational Profile: Description of a professional role in the space downstream sector, including required knowledge (BoK), skills, transversal skills (ESCO), application field (ISCED-F) and EQF level.

OPT: Occupational Profile Tool. SpaceSUITE tool for browsing, creating, editing and sharing occupational profiles linked to the GeoSpace BoK.

Skills: Ability to apply knowledge and use know-how to complete tasks and solve problems in a GeoSpace occupational context.

Transversal Skills: Cross-sectoral skills (e.g., attention to detail, creative thinking) applicable across jobs/domains, drawn from ESCO.
